PROFILE

React js Front-end developer with 2+ years of experience in developing projects like CRM, CMS, Blogging sites, Online stores, etc
Self-learner, Teamwork person, Discipline and Punctuality in work, love new challenges, calm under pressure, and following the Cutting-edge technologies to improve me.

EXPERIENCE

Front-end developer, Novin dev, Iran — Apr 2022 - Present
Crypto currency related projects

The current working progress is based on Crypto exchange and money transactions inside the Mother company.

We use techs like **Lerna**, **Typescript**, **Websocket**, **MUI**, **React-Query** (Query), **Web3**, and ext for developing an **Orderbook** that people can put their bid or ask requests in different Crypto and Financial markets.

The learning curve of this process was so useful and interesting for me because we tried to follow the leading techs and Best-practices that made our vision brighter on what we can build with our knowledge.

From the core of this process, we release an Open-source project called **Formalite** and use it in our projects.

Front-end developer, Hillz company, Canada — 2021 - Apr 2022
Admin panel

This project is a **React-based** admin panel for the management of a car dealership that contains parts like managing vehicles data, handling the finances around negotiating vehicles, customer relationship management (CRM), controlling their site and blogs, Multilayer structure for gaining level of a simple customer to buyer, Role base login with using a Token authorization that user can change their roles base on requirement.

Front-end developer, Hillz company, Canada — 2021 - Apr 2022
Hillz website

Hillz website is a Static Site Generation (SSG) website using the **Next js framework** that contains information about their company, forms, packages that they offer to customers(Dealerships), and a blog section for SEO purposes.

Front-end developer, Hillz company, Canada — 2021 - Apr 2022
Hillz dealership website

This project is a **Server-Side Rendering (SSR)** website using the **Next js framework**.

In this project, we try to use the ability of SSR in Next js for **creating dynamic sections** based on what the dealership wants to show to people and their customers. Dynamic parts of this project come from our back-end that uses **Node js and Express framework** for the back-end server and **MySQL** for the database. With this config, we can use this project as a **Template** for other dealerships that like this design for their website and do not require massive changes in the front-end, just creating a table in the database for them and putting their information in that.

Front-end developer, freelancer, Iran, shiraz — 2021
Bonte takeaway website

Bonte takeaway is a Caffe in shiraz that 5 of my friends established. I tried to help them share their menu with customers in an easy way.

This website is generated with **React js framework** and the challenging part of this project was handling the menu images to get from a **CDN (Cloudinary)** and display it on their site.

This was a good experience for me because I learned how CDNs works and how we can use them in our projects
